Education

Washington University in St. Louis — St. Louis, MO
Master of Science in Business Analytics- FinTech, GPA: 3.5 / 4.0 — *Dec 2026*

KSV University — Gandhinagar, India
Bachelor of Business Administration - Finance, GPA: 3.5 / 4.0 — *May 2023*

Technical Skills

Finance and Valuation: DCF, WACC, Comparable Company Analysis, Precedent Transactions, Three-Statement Modeling, Accretion/Dilution, Scenario and Sensitivity Analysis, Monte Carlo Simulation, EV/EBITDA, P/E, Options and Futures Pricing
Programming, AI and Tools: Advanced Excel, PowerPoint, Tableau, Power BI, SQL Server, DuckDB, Streamlit, Jupyter, RStudio, Bloomberg Terminal, Git/GitHub, Render, Streamlit Community Cloud, MobaXterm, SEC EDGAR, FRED, U.S. Treasury, Damodaran Datasets, Yahoo Finance, Public Blockchain Data, Python (pandas, NumPy, statsmodels, Matplotlib, Seaborn, Plotly, Flask, pytest), SQL, R, Prompt Engineering, AI Agents, Claude and Gemini APIs
Analytics and Data:Forecasting, Budgeting, Budget vs. Actual, Variance Analysis, Data Validation, Reconciliation, Data Quality, Reporting Automation, Trend Analysis, Statistical Analysis, Anomaly Detection, KPI Dashboards
Business Skills: Team Leadership, Market and Vendor Research, Executive Reporting, Stakeholder Communication, Cross-Functional Collaboration, Process Improvement, Pitch Decks, Project Coordination

Experience

Team Lead – AI Strategy Consulting Project — Aug 2026 – Present
CFAR FinTech Practicum – Olin Business School
- Lead a 7-member graduate consulting team advising a national wealth management firm's Firm Strategy team on AI automation and augmentation, directing market research on products and vendors across 10 use cases.
- Develop the client's AI adoption strategy from that research, recommending 3 to 4 products that together cover all 10 use cases and narrowing them to the 2 to 3 to implement, with the expected benefit of each.

Graduate Teaching Assistant – Python and Data Science — Aug 2026 – Present
Washington University in St. Louis – Olin Business School
- Support up to 60 graduate students in DAT 5561: Introduction to Python and Data Science across 4 weekly lab sessions and 2 hours of office hours, resolving the coding issues they raise and grading labs, homework and projects with timely feedback.

Data Operations Associate — Jan 2024- Jul 2025
Baroda Global Shared Services Limited
- Consolidated productivity and KPI data for 150+ employees into executive-ready Excel reports (PivotTables, XLOOKUP, SUMIFS) and PowerPoint dashboards, giving senior leadership one performance view that informed staffing decisions.
- Validated and reconciled 1,000+ financial transaction records daily and flagged exceptions ahead of finance reviews, reducing downstream errors in finance review cycles.
- Converted large datasets into variance analyses, KPI scorecards and visualizations across 12+ monthly MIS cycles, coordinating inputs from finance and operations to give senior management decision-ready narratives.

Finance Intern — June 2023- Dec 2023
Khodiyar Infrastructure
- Reconciled and validated 500+ financial records weekly with systematic exception flagging to strengthen internal controls, and built 2 to 3 Excel dashboards that the firm's owner used to track operational KPIs and performance trends.

Projects

Cloud Cost Analyst Model | *Python, SQL, DuckDB, NumPy, Streamlit, Claude/Gemini API* — Nov 2026– persent
- Built a cloud cost analysis app on Microsoft's Azure Public Dataset (2.7M VMs, 21.2M dollars monthly spend) with a SQL star schema and a 12.7M-row cost table, validated by 8 reconciliation checks that tie out to the cent.
- Developed forecasting and anomaly-detection models in NumPy to predict spend and flag unusual changes, reaching 0.86 percent next-day forecast error (vs. 1.04 percent for Holt-Winters) and an anomaly F1 score of 0.946.
- Designed an AI agent that re-checks every number against the data before release, catching 99.8 percent of 531 injected errors, and identified 3.75M dollars per month (17.7 percent of spend) in idle and rightsizing savings.

Cross-Chain Stablecoin Bridge Failure Research | *FIN 5507 Seminar in Financial Technology* — Aug 2026 – Present
- Built the event registry for a 10-member research team, screening 54 bridge incidents against 3 inclusion rules to identify the 5 cases studied, and ran feasibility checks across 10 outcomes that set the limits of the study.

M and A Deal Cracker | *Python, Flask, Gemini/Claude API, SEC EDGAR, Render* — Mar 2026 – Present
- Built and deployed an M and A valuation web app, first in Python, Flask and the Gemini API and then upgraded to pull SEC EDGAR financials, so entering 2 tickers returns WACC and a 5-year DCF with 3 scenarios.
- Modeled deal structure (cash/stock mix, synergies, EPS accretion/dilution) with 5,000-run Monte Carlo simulations showing the probability a deal is accretive, and added 9 automated accuracy checks per company.

Digital Payments Adoption Study | *Excel, Survey Research, Descriptive Statistics* — Jan 2023 – May 2023
- Led a 5-member capstone team that surveyed 196 residents on digital payment adoption, finding 87.7 percent awareness and 67.7 percent usage, and that 38.5 percent had faced problems, most often failed transactions (31.2 percent).
